I am an undergraduate student in the Department of Automation at Tsinghua University. My research studies how language-model agents turn information and reasoning into action: when evidence changes behavior, when it does not, and how these differences should reshape evaluation and model design. I am especially interested in reasoning-to-action gaps, revision, behavioral internalization, procedural control, and cognitive architectures for learned control and adaptation.

Education Background

Tsinghua University 2025 - Present

Department of Automation - Undergraduate

Research Experience

Independent Research 2026 - Present

- Design controlled, paired, and stage-resolved experiments on language-model agents, separating process behavior from endpoint success and testing robustness across tasks and models.
- Produced four public single-author preprints on coding-agent trajectories, implementation fidelity, procedural objectives, and judgement-to-policy internalization.

Collaborative Research, Tsinghua University Summer 2026 - Present

- Work with Fan Lifeng and Zhihao Cao on language-model reasoning and representation; contributions include data review, experimental redesign, probing, quantitative analysis, and circuit discovery.

Selected Preprints

Behavioral Success Without Internalization: When Scientific Judgements Fail to Bind Language-Model Policies 2026

[TechRxiv preprint](#) - single author

When Evidence Becomes a Veto: Procedural Objectives and Decision-Authority Inflation in LLM Agents 2026

[TechRxiv preprint](#) - single author

What Changes, When? Intervention Effects Along Coding-Agent Trajectories 2026

[TechRxiv preprint](#) - single author

Same Contract, Different Product Role: A Controlled Study of Coding-Agent Implementation Fidelity 2026

[TechRxiv preprint](#) - single author

Personal Skills

Research	Controlled/paired experiments; stage-resolved evaluation; bootstrap CIs; sensitivity analysis; LLM/agent evaluation.
Programming	Python, PyTorch, Hugging Face Transformers; C/C++.
Tools	Linux/SSH, Git, LaTeX, Jupyter Notebook.
Languages	Chinese native; English reading and writing for academic research.

Research Interests

AI Agents	Model Behavior	Reasoning & Action	Internalization	Evaluation	Cognitive Architectures
