I am an undergraduate student in the Department of Automation at Tsinghua University. My research studies how language-model agents turn information and reasoning into action: when evidence changes behavior, when it does not, and how these differences should reshape evaluation and model design. I am especially interested in reasoning-to-action gaps, revision, behavioral internalization, procedural control, and cognitive architectures for learned control and adaptation.

Education Background

Tsinghua University 2025 - Present

Department of Automation - Undergraduate

Research Experience

Independent Research 2026 - Present

- Design controlled, paired, and stage-resolved experiments on language-model agents, separating process behavior from endpoint success and testing robustness across tasks and models.
- Produced four public single-author preprints on coding-agent trajectories, implementation fidelity, procedural objectives, and judgement-to-policy internalization.

Collaborative Research, Tsinghua University
